Command Line Interface

pwd(print working directory):
mkdir NAME (make directory)
ls (list directory)
cd <directory path> (change directory)
cp <Hello.java> <Hello1.java> (copy file to Hello1)
mv <file> <dir> (move file to dir)
E.g. mv Hello.java .. (.. => move one level up from current directory, ~ => home directory)
mv <file> <new file> (change file name)
rm <file> (remove file)
rm -rf <dir> (Recursively and Forcefully remove all files & sub dir in <dir>)
CTRL-z (suspends a program)
fg (bring back most recent suspended program)

vim <Hello.java>
java Main < test.in (< => redirect; so whole thing is redirect test variables in test.in as args
                              into Main java class)

jshell (for one liner java code to test)
/exit
/open <filename>
/list (list contents of file opened)
